Sup Y’all! Welcome to my GitHub.

Here is a lil bit more about who I am and what I'm building.

About Me
Age: 17 years old.
Education:High School student at **SESI** & currently taking a technical course in Industrial Automation.
Learning Style: 75% self-taught and the others are 25% from friends from my group. I learn Cybersecurity, Hardware Engineering, and Software Development.
The Goal: As soon as I graduate, I'm heading straight into the tech camp to master Software Engineering and learn how to build my own advanced tools from scratch.

Cybersecurity & Hacking Journey
Right now, I might still be considered a *script kiddie* by some, but I'm deeply focused on the fundamentals. I've already successfully executed a **Man-in-the-Middle (MiTM) attack** in a controlled lab environment, and I'll be publishing the complete documentation here soon for strictly educational purposes.

My background in Industrial Automation gives me a unique perspective on hardware security, and I love breaking down how systems work under the hood.

No fluff, no identity politics, just raw tech and engineering
